

INetworkSerializable

```
classDiagram
    class INetworkSerializable
    class BasicByteArraySender {
        +DataSendArray
        +NetworkSerialize<T>()
    }
    BasicByteArraySender --|> INetworkSerializable
```

The diagram illustrates a class hierarchy. At the top is the `INetworkSerializable` interface, represented by a white box with a gray border and two empty compartments below the name. Below it is the `BasicByteArraySender` class, represented by a gray box with a gray border. The class name is in the top compartment, and the two compartments below contain the members `+ DataSendArray` and `+ NetworkSerialize< T >()`. A blue arrow with an open triangular head points from the `BasicByteArraySender` class to the `INetworkSerializable` interface, indicating that `BasicByteArraySender` implements `INetworkSerializable`.

BasicByteArraySender

+ DataSendArray

+ NetworkSerialize< T >()
